Examiner's Amendment

6. An Examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to Applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this Examiner's amendment was given in a telephone interview with Abigail E. Lighthart (Reg. No. 62,624) on December 31, 2008.

The application has been amended as follows:

AMENDMENTS TO THE CLAIMS

Please amend Claims 22, 23, and 43 as follows:

22. (Currently amended) A downloadable set of processor-executable instructions for performing the improved method of claim 1 stored on a computer-readable medium.

23. (Currently amended) In a computer system, an improved system for developing and executing an application, the improved system comprising:

a computer system having a processor and memory;

a modeling tool for creating a model describing business objects and rules of the application;

a module for creating source code for the application and representing the model within the source code of the application itself, wherein the model is represented as source code and code attributes;

a compiler for compiling the source code into an executable application; and

a run-time framework that is able to, while the executable application is running, reconstruct the model from the representation incorporated into the executable application and use it for providing services, including reading metadata incorporated into the executable application using reflection to create a graph of code elements and spanning the graph for re-creating the model based on code elements encountered.

43. (Currently amended) A method for developing and executing an application on a computer system, the method comprising:

creating a model for developing an application using Unified Modeling Language (UML) technique;

generating source code of the application to implement the model;

Art Unit: 2191

amending the source code of the application for storing model information in the source code of the application itself as source code and code attributes;

compiling the amended source code into an executable application and running the executable application on the computer system;

while the executable application is running, reconstructing the model from the model information incorporated into the executable application, including reading metadata incorporated into the executable application using reflection to create a graph of code elements and spanning the graph for re-creating the model based on code elements encountered; and

making the reconstructed model available for supporting operation of the executable application, including rendering the reconstructed model for display.

-- END OF AMENDMENT --

Reasons for Allowance

7. The following is an Examiner's statement of reasons for allowance:

The cited prior art taken alone or in combination fail to teach, in combination with the other claimed limitations, "creating source code for the application, including representing the model within the source code of the application itself, wherein the model is represented as source code and code attributes" and "while the executable application is running, reconstructing the model from the representation incorporated into the executable application and making it available to the run-time framework, including reading metadata incorporated into the executable application using reflection to create a graph of code elements and spanning the graph for re-

Art Unit: 2191

creating the model based on code elements encountered” as recited in independent Claim 1; and further fail to teach, in combination with the other claimed limitations, similarly-worded limitations recited in independent Claims 23 and 43.

The closest cited prior art, the combination of US 6,199,195 (hereinafter “Goodwin”) and US 7,000,219 (hereinafter “Barrett”), teaches automatically generating source code objects within extensible object frameworks and links to enterprise resources. However, the combination of Goodwin and Barrett fails to teach “creating source code for the application, including representing the model within the source code of the application itself, wherein the model is represented as source code and code attributes” and “while the executable application is running, reconstructing the model from the representation incorporated into the executable application and making it available to the run-time framework, including reading metadata incorporated into the executable application using reflection to create a graph of code elements and spanning the graph for re-creating the model based on code elements encountered” as recited in independent Claim 1; and further fails to teach similarly-worded limitations recited in independent Claims 23 and 43.

Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
